Art Unit: 2154

1. Applicant is requested to provide serial numbers of copending related applications cited in page 1 of the specification.

Art Rejections:

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b); by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 10-27 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Gatz et al, U.S. pat. Appl. Pub. No. 2002/0049806.

Art Unit: 2154

Per claims 10 and 18, Gatz discloses a system for providing child protection in communications services comprising:

a) means for creating a child persona of communications services having at least one communications account for a communications service associated with the child persona, wherein the child persona is intended to be used by a child (see paragraphs 53-58); and

b) means for restricting a first operation from being performed by a user who is using the at least one communications account of the child persona (see par. 73-78).

Per claims 11-12, Gatz teaches allowing certain operations to be performed by a user who is using the child account, receiving emails in a family mail folder or storage area (see par. 73).

Per claims 13-14, Gatz teaches prompting the user for a proof of authorization responsive to detecting that the user of the child account requests to perform a restricted operation (see par. 84-85).

Per claims 15-17, Gatz teaches that restricted operations include access to adult message boards and modifying system settings (see par. 75 and 85).

Claims 19-27 are similar in scope as that of claims 10-18.

Art Unit: 2154

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gatz.

Per claims 1-7, Gatz teachings are still applied as discussed in item 2 above. Gatz also teaches providing an access control logic for determining user account type in response to detecting the user attempts to perform a restricted operation (see par. 84-85). Gatz does not explicitly teach relaying the account type to the communication user interface.

Art Unit: 2154

It would have been obvious to one of ordinary skill in the art at the time the invention was made to recognize such relaying of information from the control access logic to the communication user interface because it would have enabled the communication user interface to prevent a child user from operating restricted operations.

Per claims 8-9, Gatz teaches providing a user interface including folder list for displaying communication messages (see par. 79-80) and user interface for configuring account/folder setting (see par. 84 and fig. 18).

Conclusion:

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Vu whose telephone number is 571-272-3977.
